Module 1.0:

Check Yourself

A model hallucinates because it generates responses based on predictions. To make a prediction, a model draws on the information it has access to. If that information is incorrect, the user will receive an incorrect answer.

Module 1.1:

Check Yourself

I'd expect columns including resident names, phone numbers/emails, balances owed, and other relevant specific information. Before entering the sheet into an AI tool, the user would either need to exclude all primary identifiers, ensure there aren't multiple quasi-identifiers, or change the AI model's settings so that data will not be used to train the system.

Scenarios

1. Check what will be done with the data you input. If it is used to train the system, disable it, or don't use the system altogether. Otherwise, you risk exposing personal data.
2. If the sentence doesn't contain any system-specific material, it should be ok. It really depends on context and what information is present.
3. It depends on your company's policies. If it is supposed to be information only available to your company, don't tell them.
4. You must check this and verify it yourself because you owe it to the reader.
5. Explain to the interviewer that you use AI in a way that fits within the firm's overall guidelines. You should not be harmed for this.
6. Personal data like this cannot be entered into an AI model that uses data for training. You owe it to your clients that their data will not be shared in this way, even if it is technically legal.
7. This type of request would need management approval and would likely be a company-wide decision.
8. You let your supervisor know, fix the draft, and assert that it will not happen again.
9. You adhere to your professor's syllabus and do not use AI on that particular assignment.
10. You check what you did 3 weeks ago, and whether you sign depends on that.

Module 1.2:

What your platform calls it	*Where you found it*	*One job it could take on*
Connectors; built on MCP	One such link, something that can be attached, like Calendar	Connecting to Calendar to schedule calls
Projects, project knowledge, memory	In Claude on the left-side tab	School projects that require multiple documents and are completed over a longer period of time
Skills	A small folder	Projects that require several

		documents
Sharing dependent on your Claude plan	In a workspace or repository	Project that includes multiple people and several documents. Groupmates don't need to continue updating their individual workspace, but can go to a collective one.

Module 1.3:
Check Yourself

1. Affects line 16: changes the rent from $1500 to $1375
2. Affects line 17: explains that $1500 is an asking rent instead of a lease
3. Affects line 18: collected rent is $0
4. Affects lines 14 and 15: explains why they sit $75 below the $1450 renovated units

Module 2.1:
Check Yourself
pwd shows you where you are and ls tells you what's in the folder.
